

TRAN XUAN DAN

GAME DEVELOPER

CERTIFICATE

UNITY GAME PROGRAMMING -ITPLUS (2020)

Graduated with honors from the Game Programming course at IT Plus Academy, Hanoi (2020).

EDUCATION

INFORMATION SECURITY

2016 - 2021

Posts and Telecommunications Institute of Technology

- Studied fundamental computer science concepts.
- Learned the basics of programming in various languages.
- Specialized in cybersecurity and information protection.

INTRODUCTION

I have around 5 years of experience in game programming, particularly in developing casual, hybrid-casual, NFT, and gambling games. I've worked with a wide range of engines including Unity, Unreal, Cocos, and Godot. I enjoy exploring new technologies and techniques in game development, and I'm seeking a dynamic, forward-thinking environment where I can continue to grow and contribute meaningfully.

WORK EXPERIENCE

GAME DEVELOPER - ONSITE AND REMOTE

03/2024 - 02/2025

Onsite and Freelancer

- **Inwave Studio - Onsite (03/2024 - 02/2025):** Used Unity to upgrade old features, programmed new hybrid-casual features, upgraded SDKs, integrated new ad networks and SDKs, and optimized performance for **Dancing Road**
- **Vietnam casino game - Remote (12/2024 - 03/2025):** Used Cocos Creator 2.4.5 and TypeScript to fix UI bugs and game flow issues.

GAME DEVELOPER - FREELANCER

10/2023 - 03/2024

Freelancer

- **AIRSPEDER - Remote:** Used Unreal Engine 5 to develop an NFT airplane racing game in direct collaboration with an Australian client. Integrated Hyperplay for crypto wallet login and handled smart contract ABIs.
- **GOLF GAME - Onsite and Remote:** Used Unity to develop **ZeroPutt**, a golf game integrated with a custom hardware device for gameplay.
- **JJSDK - Onsite and Remote:** Integrated a native plugin (originally used in Unity) into Unreal Engine 5 to connect and communicate with AR glasses.

UNITY DEVELOPER

03/2023 - 09/2023

Onsite and Remote

- **UXPON - Remote (08/2023 - 09/2023):** Programmed casual game projects; worked with Nakama to handle game login via Facebook and Google.
- **Unicorn Studio - Onsite (03/2022 - 07/2023):** Participated in the development of game products and outsourcing projects for the company; trained Unity interns; contributed to project estimation for clients.
- **Extreme Vietnam - Onsite (03/2020 - 03/2022):** Developed casual game projects using Unity; created 3D apps; supported the design team in delivering final products to customers.

FEATURED PROJECTS

DANCING ROAD

03/2024 - 02/2025

Description: A casual music game released in 2019.

Technology: Unity Engine

Responsibilities:

- Upgraded old features: Revamped the “Continue” system
- Updated new features: Added music elements, improved visual feedback, implemented loudness handling, and developed “Planet” phases (1–4)
- Upgraded SDKs: Anzu Ads, AdQuality, IronSource
- Integrated new ad networks for IronSource: Maticoo, Moloco, Pubmatic
- Integrated new SDKs and features: Monetizr Ads, Playgap Ads, Dreamteck Spline, Deeplink, IronSource TestSuite
- Optimized performance: Reduced build size and RAM usage, improved loading time, optimized Bitbucket capacity, standardized item and inventory systems, and handled Crashlytics reports and exceptions
- Other tasks: Verified IDFA tracking

- Android: <https://play.google.com/store/apps/details?id=com.amanotes.pamadancingroad>

SLIME ROYALE

12/2021 - 11/2022

Description: An NFT game designed in the style of a RPG character card game.

Technology: Unity Engine

Responsibilities:

- Participated in the development of core gameplay and ad flow.
- Developed key features such as Nurturing, Gacha, Shop, and My Slime.
- Integrated server-provided APIs.
- Assisted in bug fixing.

AIRSPEDDER

10/2023 - 11/2023

Description: NFT airplane racing game project made directly with Australian customers

Technology: Unreal Engine 5, Hyperplay

Responsibilities:

- Develop metamask login + interaction with smart contract
- Implement API
- Develop UI for sign wallet, leaderboard
- Participate in bug fixing

MEEP LABO

12/2022 - 03/2022

Description: Meep Labo is an NFT project centered around virtual pet raising gameplay.

Technology: Client, Server Socket - Unity Engine, Mirror

Specific tasks:

- Implemented Meep characters and their in-game interactions
- Fixed bugs and optimized existing features
- Integrated front-end APIs provided by the back-end team
- Connected Smart Contracts using Smart Contract ABIs
